8 October 2026

Dear Editorial Office,

Thank you for the technical assessment of our submission (unsubmitted 08-Oct-2026). We have addressed each item as follows and resubmit.

Manuscript: "From Embodied Experience to Persistent Experience-Derived State: An Auditable Unified-Graph Architecture and a Preregistered Boundary Analysis of Activation-Based Access"

1. Institutional email and profile links (single author). Author: Kailin Yan. Institutional email: 2024015943@st.cupk.edu.cn (China University of Petroleum-Beijing at Karamay — student address on the university's st.cupk.edu.cn domain; identical to the address on the manuscript title page and the submission portal account). Profile link: ORCID 0009-0009-6762-2684 (https://orcid.org/0009-0009-6762-2684). The author is a degree-seeking student without a personal institutional web page; ORCID is provided as the persistent identifier.

2. Relevance to the journal. The journal's scope explicitly includes cognitive modeling, the design and experimental evaluation of agent architectures, and embodied artificial intelligence. This paper contributes on exactly those axes: (i) an auditable unified-graph cognitive architecture (FAS) in which episodic, semantic and procedural knowledge share one structure with a single evidence-weighted write-back pathway; (ii) preregistered, fully archived behavioral experiments in a deterministic embodied sandbox — including a preregistered rejection of the architecture's own headline hypothesis (spreading activation showed no incremental value over flat retrieval); and (iii) a boundary analysis, with parameter sweeps, of when activation-based access does and does not pay. JETAI has historically published the cognitive-architecture line this work builds on (Soar, ACT-R-inspired designs) and current embodied-agent research; the methodology (preregistration plus reproducibility package) is offered as a contribution to the experimental standards of that community.

3. Technical-check items.

- Table 3 is now referenced in the text (Section 5.1: "Table 3 reports the full grid.").
- The title page now includes the keyword list.
- The affiliation in the manuscript files now matches the submission metadata exactly: "Department of Computer Science, China University of Petroleum-Beijing at Karamay, Karamay, China".
- The manuscript body has been reduced to 4,982 words (excluding tables, figures, captions, algorithms and references). The relocated passages were moved verbatim — no wording or number altered — into the supplementary file, new Section S19 (subsections S19.1–S19.13), where each carries a "moved from Section X" heading; the main text retains summaries with pointers to S19.

All data and code are deposited (Zenodo, DOI 10.5281/zenodo.23196280); the anonymized manuscript withholds the DOI per double-blind policy.

Sincerely,

Kailin Yan
