
Cell value: paired success difference on the joint target over 30 seeds (FAS minus closed-form flat). Green cells: all $w \le 0.5$, $d \le 1$; orange cells: all $w \ge 0.7$, $d \ge 1$. The original shared-hub configuration ($k = 2$, $d = 0$, $w = 0.5$) replicates at FAS 30/30 vs flat 0/30.
